The image shows a corner of a spa or shower stall. The walls and built-in benches are covered in small, square, blue mosaic tiles. Two twisted, silver-colored columns stand in the corner. On a shelf in the background, a silver-colored urn sits. In the foreground, on the floor of the stall, another silver-colored urn is placed. The lighting is soft, creating a serene atmosphere.

STONALIZZAZIONE

Il termine stonalizzazione indica il grado di variazione cromatica tra piastrelle dello stesso lotto di produzione.

Aspetto uniforme

Piastrelle dello stesso lotto di produzione non presentano differenze significative.

Variazione minima

Sono apprezzabili lievi differenze di colore tra piastrelle dello stesso lotto di produzione.

Variazione moderata

Sebbene il colore di una singola piastrella sia indicativo del colore delle altre piastrella, piastrelle dello stesso lotto di produzione possono presentare differenze di colore significative.

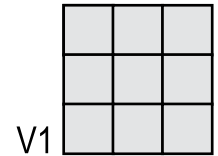

Forte stonalizzazione

Le piastrelle dello stesso lotto di produzione presentano differenze casuali di colore.

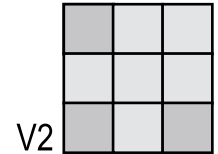

SHADE VARIATION

The shade of tiles within the same production run may vary significantly from piece to piece, so a standard scale has been established to indicate the degree of such variation for each tile model.

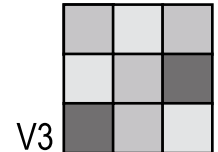

Uniform appearance

Minimal to no differences between pieces from the same production run.

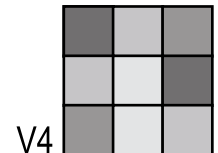

Slight variation

Slight color differences between pieces from the same production run.

Moderate variation

While the color on a single tile is indicative of the color of tiles from the same production run, the color on other tiles may vary significantly.

Substantial variation

Tiles from the same production run have random color differences.

POSA E MANUTENZIONE

I nostri prodotti sono preziosi e delicati; per ottenere una posa corretta e un risultato finale perfetto vi consigliamo di rivolgervi ad un posatore professionista.

Per qualsiasi dubbio vi invitiamo a contattare il nostro servizio clienti all'indirizzo info@lifetile.it.

Per evitare danni alla superficie delle piastrelle è estremamente importante maneggiare le piastrelle con cura evitando contatti con qualunque oggetto sporco o abrasivo; per ridurre al minimo i rischi di abrasione consigliamo di estrarre e posare una piastrella per volta; consigliamo altresì di posare le piastrelle prelevandole da più confezioni, miscelando il prodotto durante la posa.

MASSETTO/INTONACO

Realizzare il massetto di posa o intonaco con malta di cemento e attendere la maturazione dello stesso sino al raggiungimento di un'umidità residua inferiore al 2% (il tempo di attesa è di circa una settimana per ogni centimetro di spessore).

Il massetto da pavimento dovrà avere uno spessore superiore a 5 centimetri e rispettare i giunti esistenti. Prima della posa occorre controllare l'idoneità del massetto o intonaco che si dovrà presentare planare, consistente, asciutto e pulito; correggere eventuali irregolarità con livellanti e autolivellanti; nel caso di sovrapposizione ad un precedente pavimento, verificare che le piastrelle esistenti siano ben ancorate al sottofondo pulendo a fondo il pavimento con soda caustica diluita in acqua al 10-15%, risciacquando accuratamente.

POSA

Le piastrelle devono essere posate con il metodo della doppia smaltatura; l'adesivo di colore bianco è applicato sia sul fondo di posa che sul retro delle piastrelle (2-3 millimetri). Utilizzando questo metodo, che garantisce la posa "a letto pieno", si evita la formazione di vuoti che pregiudicherebbero l'incollaggio.

Per i mosaici è consigliabile stendere l'adesivo di colore bianco sul sottofondo con una spatola dentata da 4 millimetri, ricoprire completamente ed in modo uniforme l'intera superficie e posare il mosaico su rete sul collante fresco nel periodo di tempo aperto dell'adesivo, prima che si formi la pellicola superficiale (il tempo aperto è indicato nella scheda tecnica dell'adesivo). Pressare con cura per ottenere una perfetta adesione.

Le piastrelle, non su rete, devono essere posate con una fuga minima di 1 millimetro, rispettando i giunti presenti sul sottofondo. Il formato della piastrella e il coefficiente di dilatazione termica del materiale possono determinare la scelta di fughe di ampiezza superiore.

PRODOTTI CONSIGLIATI

Per la posa sia di piastrelle che di mosaici consigliamo l'utilizzo di prodotti come Kerakoll H 40 TENAX bianco e Mapei ADESILEX P10, adesivi professionali monocomponenti ad elevata resistenza e deformabilità, resistenti all'acqua e al gelo; in generale, il prodotto utilizzato dovrà avere le seguenti caratteristiche:

Colore bianco

Durata dell'impasto (pot-life): > 4 h

Tempo aperto: > 30 min UEAtc/DIN/EN

Aggiustabilità: > 30 min DIN

Pedonabilità: 24 - 48 h

Scivolamento verticale nullo: 0 mm UEAtc/DIN/EN

Stuccatura delle fughe a parete: 3 - 6 h

Stuccatura delle fughe a pavimento: 24 - 48 h

Messa in servizio: 7 - 14 giorni

Flessibilità: > 5 mm UEAtc/EN

(Dati rilevabili a 23 °C / 50% U.R.)

STUCCATURA

Per la stuccatura è necessario aspirare o rimuovere con cura tutta la polvere presente nell'ambiente; per evitare che il materiale in superficie si rovini è necessario utilizzare stucchi extra fini che non contengano forti acidi o basi; la stuccatura delle fughe avviene a collante parzialmente indurito, utilizzando lo stucco professionale impastato con acqua pulita nei dosaggi riportati sulla confezione.

La pulizia dello stucco deve avvenire nei tempi riportati sulla scheda tecnica mediante l'uso di una spugna e acqua pulita; al termine della posa, pulire le piastrelle utilizzando uno straccio asciutto per asciugare la superficie, lasciandola perfettamente lucida.

MANUTENZIONE E PULIZIA

Le piastrelle decorate con metalli preziosi assumono caratteristiche superficiali simili a quelle del metallo utilizzato, pertanto sono soggette ad usura nel tempo e non devono essere assolutamente messe a contatto con materiali abrasivi o acidi; per questo motivo è consigliabile procedere alla pulizia solo se necessario.

In generale, per la pulizia delle piastrelle suggeriamo l'utilizzo di un panno delicato pulito e di un prodotto neutro che non contenga alcuna polvere abrasiva; prodotti troppo aggressivi potrebbero rovinare la superficie riducendone la brillantezza.

TILING AND MAINTENANCE

Our products are precious and delicate; we advise you to hire a professional layer to perform a correct tiling and achieve a flawless result.

If you have any question or doubt, please contact our customer service at info@lifetile.it.

In order to avoid damages to the surface it is extremely important to handle tiles with care and avoid contacts with any dirty or abrasive material; to limit the risk of abrasion we advise you to take and lay tiles one by one; to achieve an optimal result we advise you to take tiles from different boxes, mixing them during the laying.

SCREED/PLASTER

Make the plaster or screed using cement mortar and let it cure until reaching a residual humidity level less than 2% (approximately one week for every centimeter of thickness); a floor screed must be at least 5 cm thick and must respect existing joints.

Before the installation it is required to control the compliance of the screed; it must be plain, consistent, dry and clean; correct any irregularity.

If you're planning a new installation over an existing floor, verify that existing tiles are firmly fixed to the substrate and clean the floor with a 10%-15% solution of caustic soda diluted with water, then rinse accurately.

TILING

Tiles must be laid by following the "floating and buttering" method which consists of spreading a white adhesive on both the substrate and the back of each tile (2-3 millimeters). This method guarantees a "full bed" laying, avoiding the formation of empty cavities that may compromise adhesion.

To achieve the best result when laying mosaics, apply the white adhesive on the substrate using a 4 millimeters toothed spreader and cover the surface uniformly. Then, lay mosaics on the fresh adhesive within its open time, to ensure that a superficial film doesn't form (the open time should be stated on the adhesive data sheet). Press with care to obtain a proper adhesion.

Tiles must be laid with joints of at least 1 millimeter and must be placed over existing movement joints in the substrate. The tile size and the coefficient of thermal expansion of the material may lead to choose a larger joint width.

TILING AND MAINTENANCE

RECOMMENDED PRODUCTS

The products we recommend to perform a proper tiling are Kerakoll H40 TENAX white or Mapei ADESILEX P10, single-component professional adhesives with high resistance and deformability, resistant to water and frost; the adhesive product should have the following characteristics:

Color: white

Pot-life: > 4 h

Open time: > 30 min UEAtc/DIN/EN

Adjustability time: > 30 min DIN

Set to light foot traffic: 24 - 48 h

Vertical slip: 0 mm UEAtc/DIN/EN

Ready for grouting on walls: 3 - 6 h

Ready for grouting on floors: 24 - 48 h

Ready for use: 7 - 14 giorni

Flexibility: > 5 mm UEAtc/EN

(Values measured at 23 °C / 50% R.H.)

GROUTING

Before grouting joints, remove all the dust in the environment; to avoid damages to the tiles' surface we recommend the use of extra fine growt powder free of strong acids and bases.

Grouting tile joints should be done when the adhesive has partially cured, using professional grout powder mixed with clean water by following the product specifix mixing instructions.

Grout cleaning must be performed within the time specified on the product data sheet by using a sponge and clean water; when tiling has been completed, clean the tiles using a dry cloth to polish and dry the surface.

CLEANING AND MAINTENANCE

Surface properties of tiles decorated with precious metals are similar to those of the metal used, so these tiles are subject to wear over time and should never be exposed to abrasive or acid materials; for this reason it is recommended to perform cleaning only when necessary.

We suggest the use of a soft and clean cloth with a neutral pH and non-abrasive product; aggressive products may ruin the surface and reduce its gloss.
